FLASH-RESCUE

TEAM VISIBILITY & DISTRESS ALERT

weartronic by NICOMATIC

A PATENTED FRENCH TECHNOLOGY

Locate a teammate

FLASH-RESCUE is a lighting system designed to make it easier to locate a teammate when smoke and darkness make visibility difficult.

Integrated directly into an SCBA cover, the solution emits a continuous light signal for easy identification and switches to a high-intensity flash **in case of distress**:

- quickly locate a teammate in low-visibility conditions;
- locate a firefighter in distress up to 8 m away in black smoke;
- automatically trigger a distress signal in case of immobility;
- operate independently of radio communication.

Easy to locate, especially in an emergency.

In case of distress, FLASH-RESCUE emits a **high-intensity light signal** to help locate the firefighter quickly, even when visibility and communications are severely degraded.

Key features

- Visibility in black smoke: up to 8 m.
- Thermal resistance: tested after exposure to over 170°C.
- Continuous and high-intensity flash modes.
- Manual or automatic activation via immobility detection.
